

Knock-Down Shipping Crates are unassembled crates which can be easily assembled and loaded by a customer

Benefits of Using a Knock-Down Crate:

- Easy Loading - Load the contents of a crate by directly attaching them to the skid and then easily assemble the rest of the crate around it for shipping. Great for bulk or heavy machinery.
- Save Space – Know-down crates are very compact in size. The compact size enables our customers to keep these crates in stock and readily available as needed for shipping.
- Save Time - No nails + 2 minute assembly time + 1 employee = \$aving\$
- Lower Freight Costs – Several crates can be stacked and shipped, taking the space of only one assembled crate. The conversion is typically 4 or 5 knock-down crates to 1 fully assembled crate. This conversion saves on truck space as well as the cost of freight.
