

NAIL-LESS AND STACKABLE WOOD PACKAGING SYSTEM

Interested in saving space, time, labor and money? Well...LEFCO's revolutionary method of package security is here! This nail-less and stackable system provides customizable, reusable, and stackable alternatives to the traditional packaging system. The crate system is fully collapsible, lightweight, reusable, and combines durable plywood walls with a galvanized steel closure system.

No nails; 2 minute assembly time; 1 employee = savings.

The entire crate system (pallet included) meets all ISPM #15 requirements, allowing global shipment capability. Easy to assemble, the only tool required is a screw driver.

The sides are stackable, allowing you to adjust the inside height by adding extra side panels.

The knock-down style of the crate system reduces shipping costs, allowing more crates to be shipped than if fully assembled. Employee assembly time is also reduced due to the revolutionary stackable and nail-less design. Give us a call to obtain a sample or place an order.
